

## Autostrada A3 Ogra-Campia

For the extension of the European trunk road network in Romania/Project A3 Section 2A Ogra-Campia-Turzii SCHREIBER has been contracted for the supply of the VS Flex and VS Finger overpasses for all 18 bridges and viaducts.

The VS Flex grade crossings have a maximum movement capacity of 350 mm and the VS Finger grade crossings up to 490 mm. The construction consortium from Italy and Germany, as well as the operating company for this section, had very high quality requirements for all components.

The design of all expansion joints was carried out in accordance with the European regulations ETAG032. In particular, the consideration of the service life of 50 years was in the foreground. Here, SCHREIBER was able to show all its expertise and design the VS Flex and VS Finger products for this service life.
