

SUCCESS STORY

Approval RTD 1007-2 Version 3.0

Expansion joint Typ SBD-SPR

ANOTHER MILESTONE ACHIEVED

RTD approval for single profile joints

Another milestone has been reached by the SCHREIBER development department.

SCHREIBER has received the RTD (Rijkswaterstaat Technisch Document) approval for single profile SBD-SPR expansion joints.

The approval was prepared according to RTD 1007-2 version 3.0. According to this latest version, only very few manufacturers have qualified. The very high requirements from the RTD 1007-2 regulations, such as the 50-year service life or proof of 80 million load transitions, as well as the requirements for the galvanized construction, shows once again the technical know-how of SCHREIBER.
